# Differences

# Snapshots

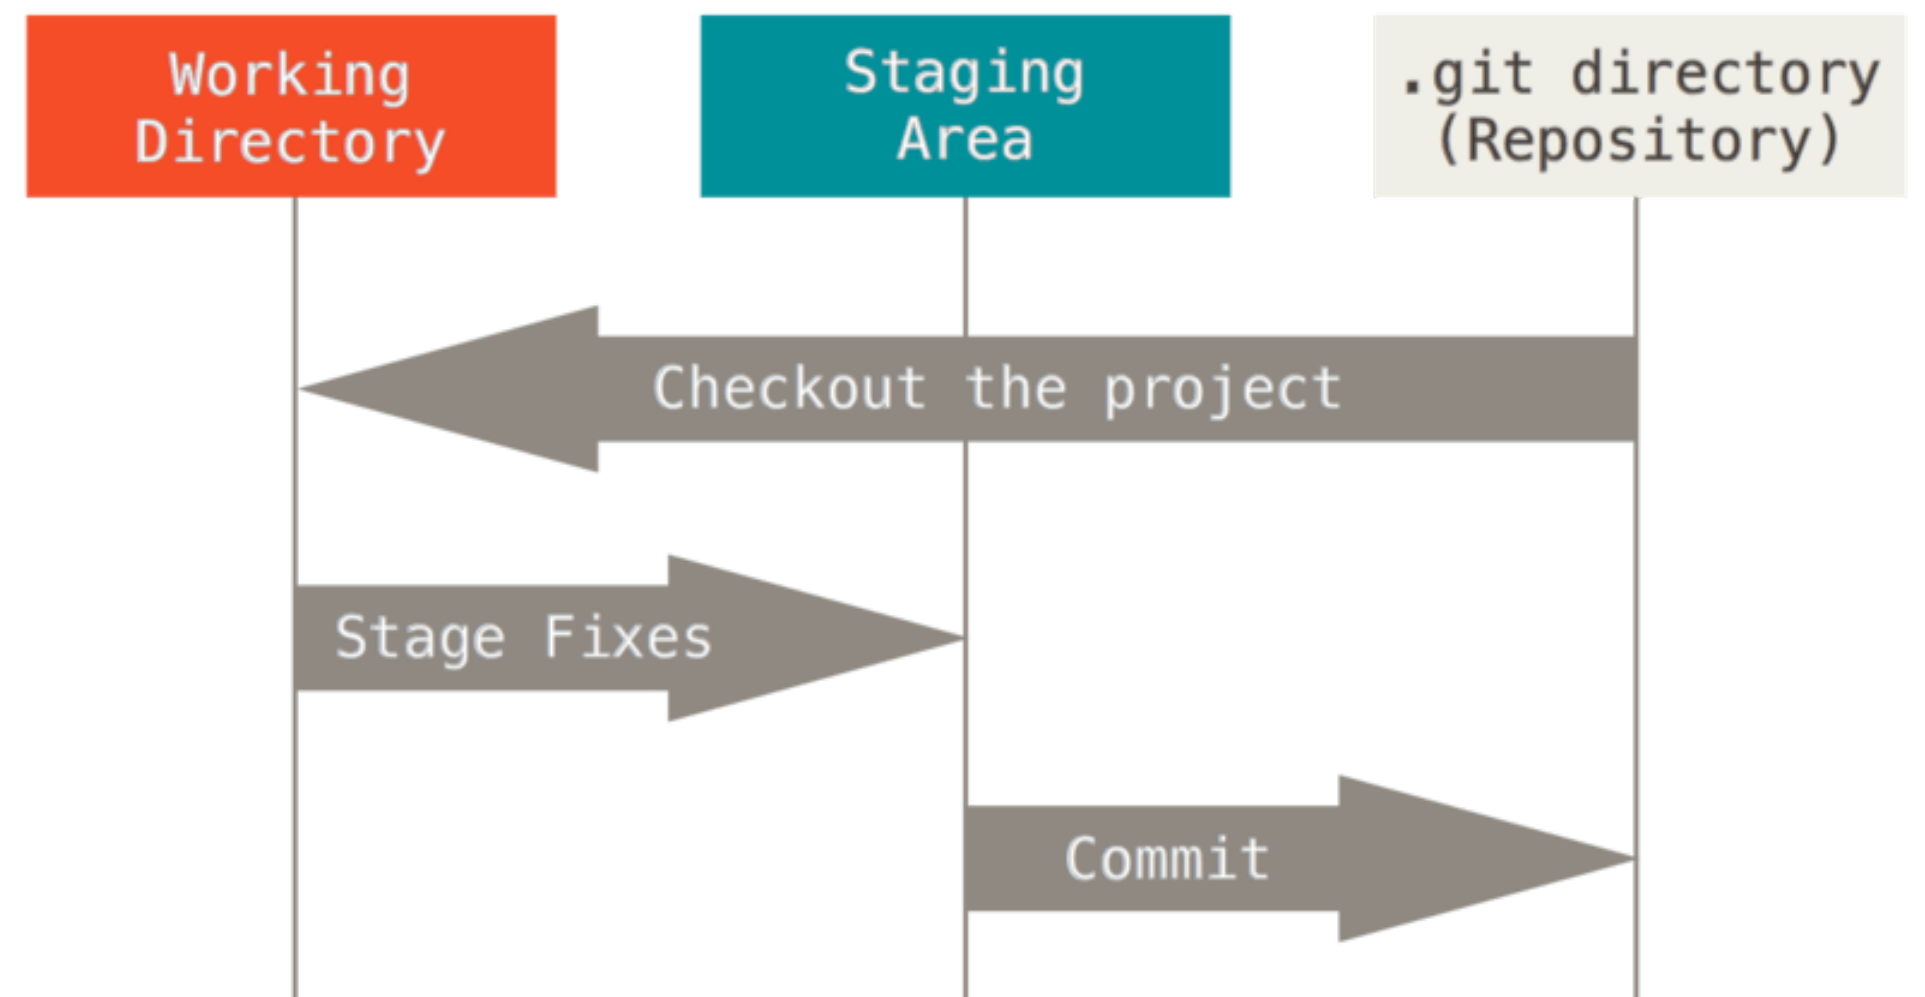

# Areas (The three states)

# Git Areas (The three states)

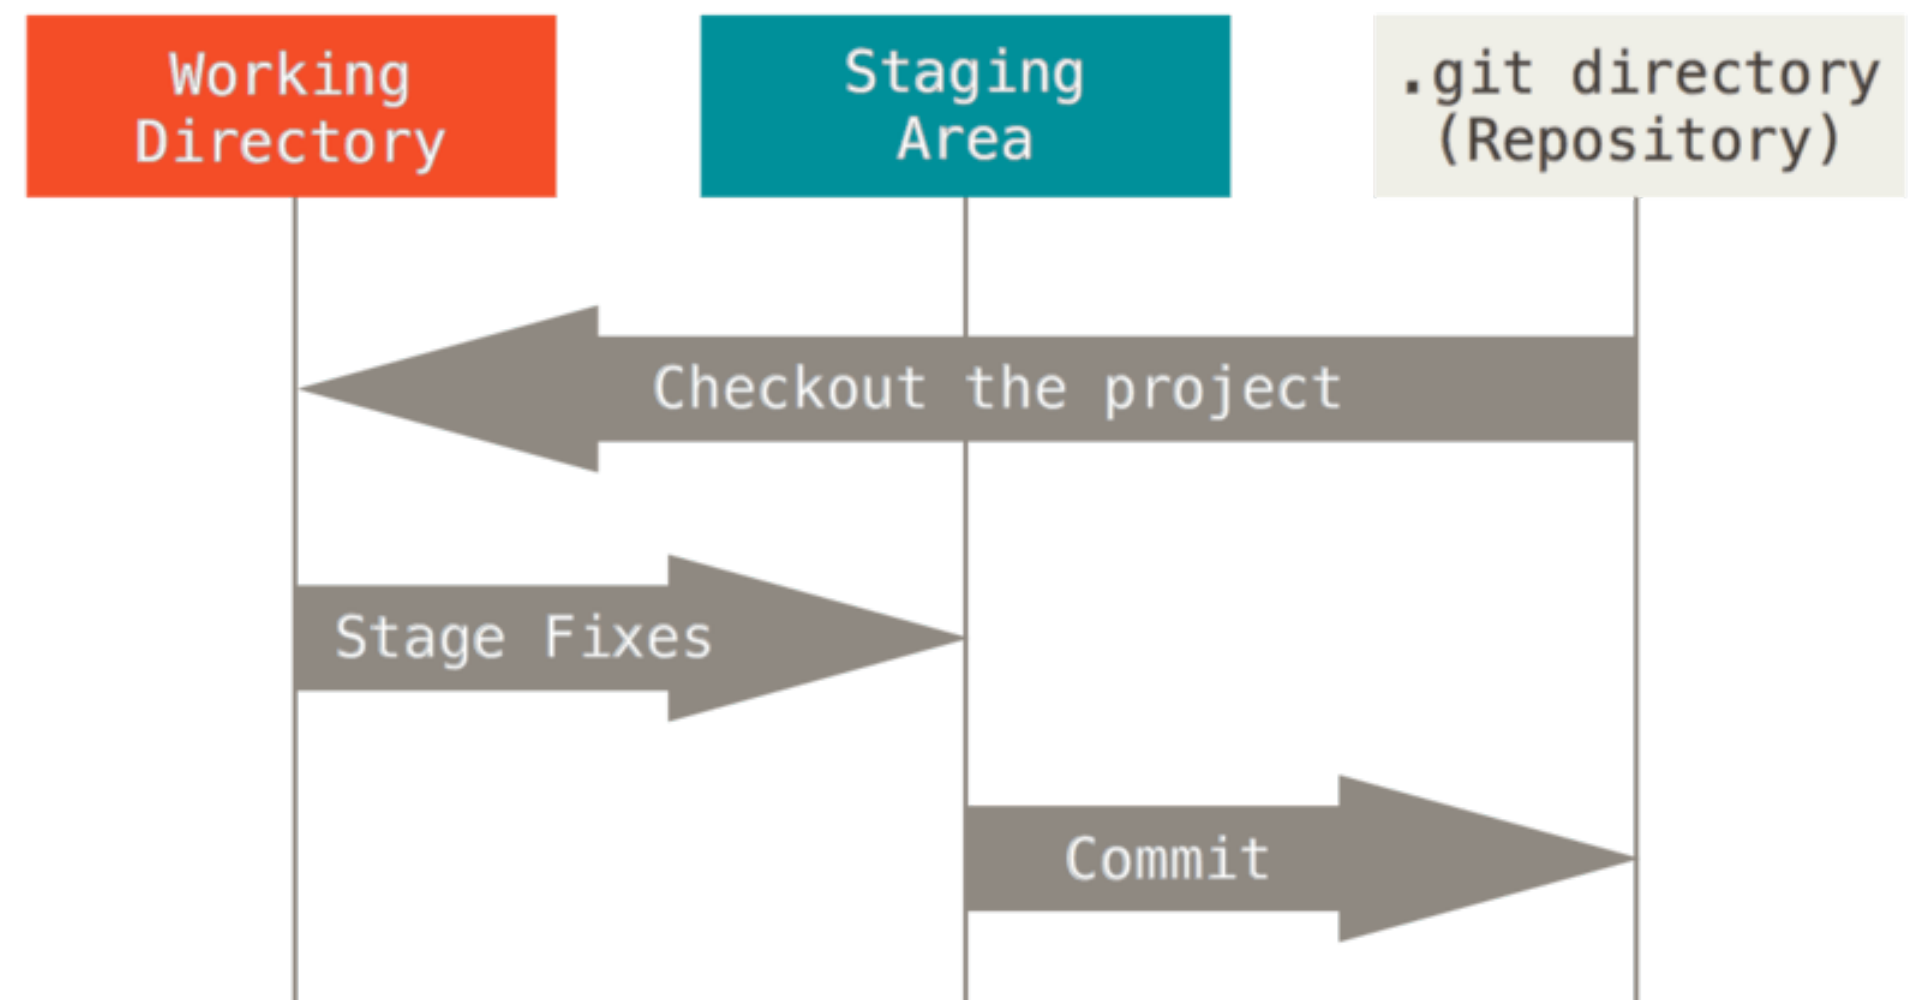

1. You modify files in your ***working tree***.

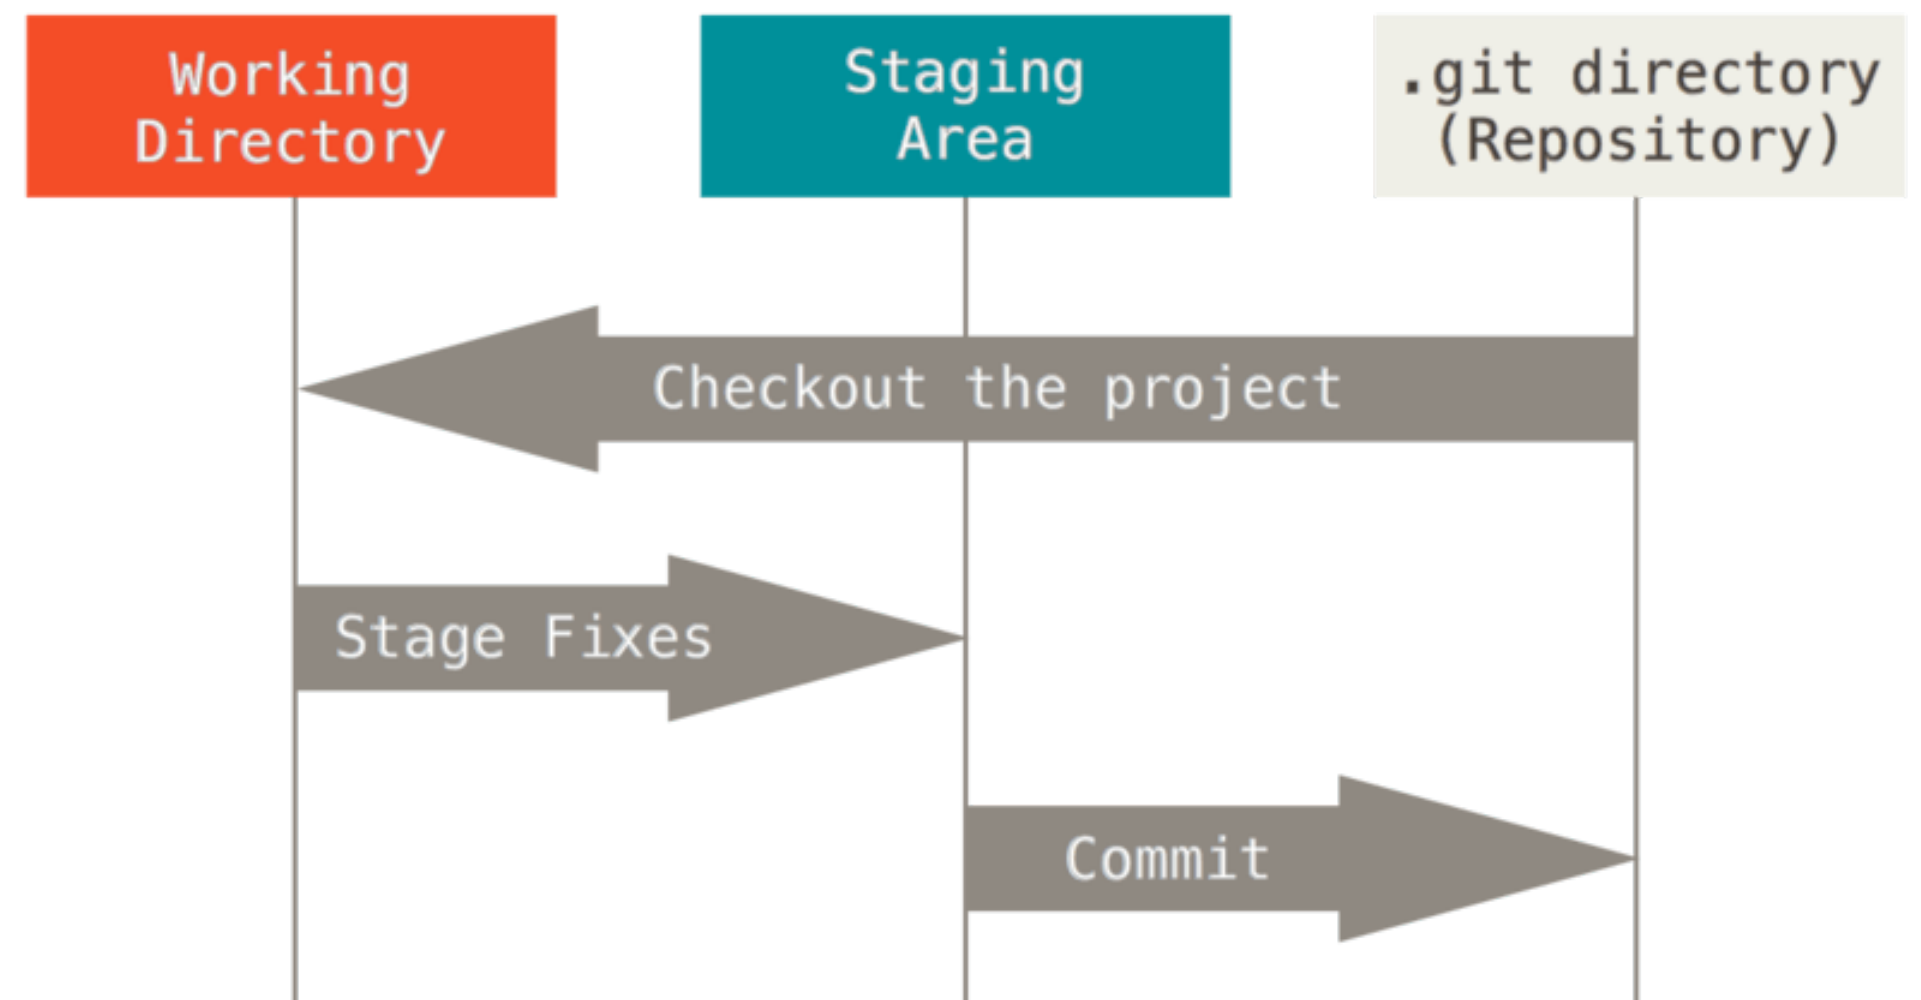

# Git Areas (The three states)

2. Selectively select just those changes you want to be included. Changes added to ***staging area***

# Git Areas (The three states)

3. You do a ***commit*** (creates a snapshot from the staging area and stores it to the Git repo)

# Git config

1. `/etc/gitconfig`
2. `~/.gitconfig` or `~/.config/git/config`
3. `.git/config` (Current project path)

## Windows Systems

1. `C:\Users\%USER% - /etc/gitconfig`
2. Windows XP  
`C:\Documents and Settings\All Users\Application Data\Git\config`  
Windows Vista - newer  
`C:\ProgramData\Git\config`
3. `.git/config` (Current project path)

# Git config

```
$ ls -la
```

```
total 216

# Git branches

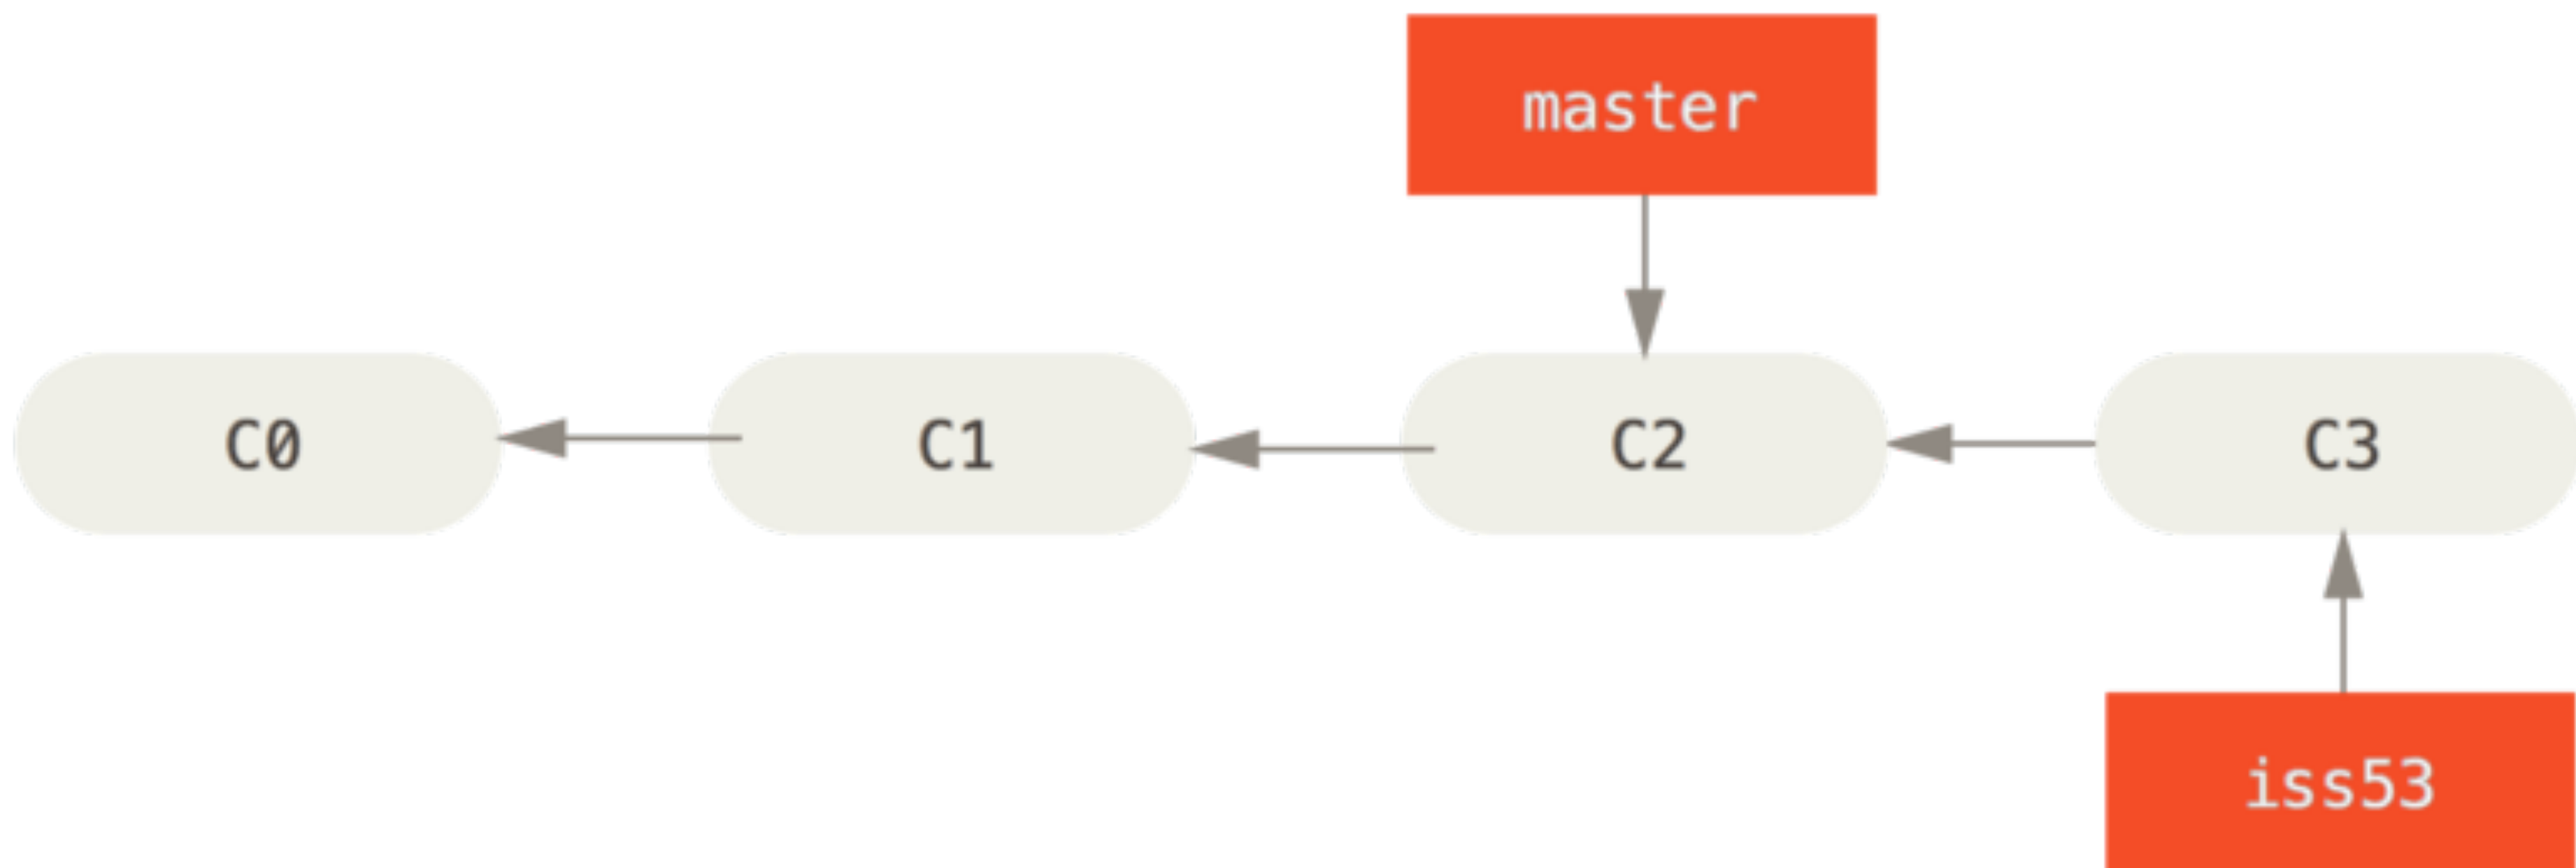

# Git branches

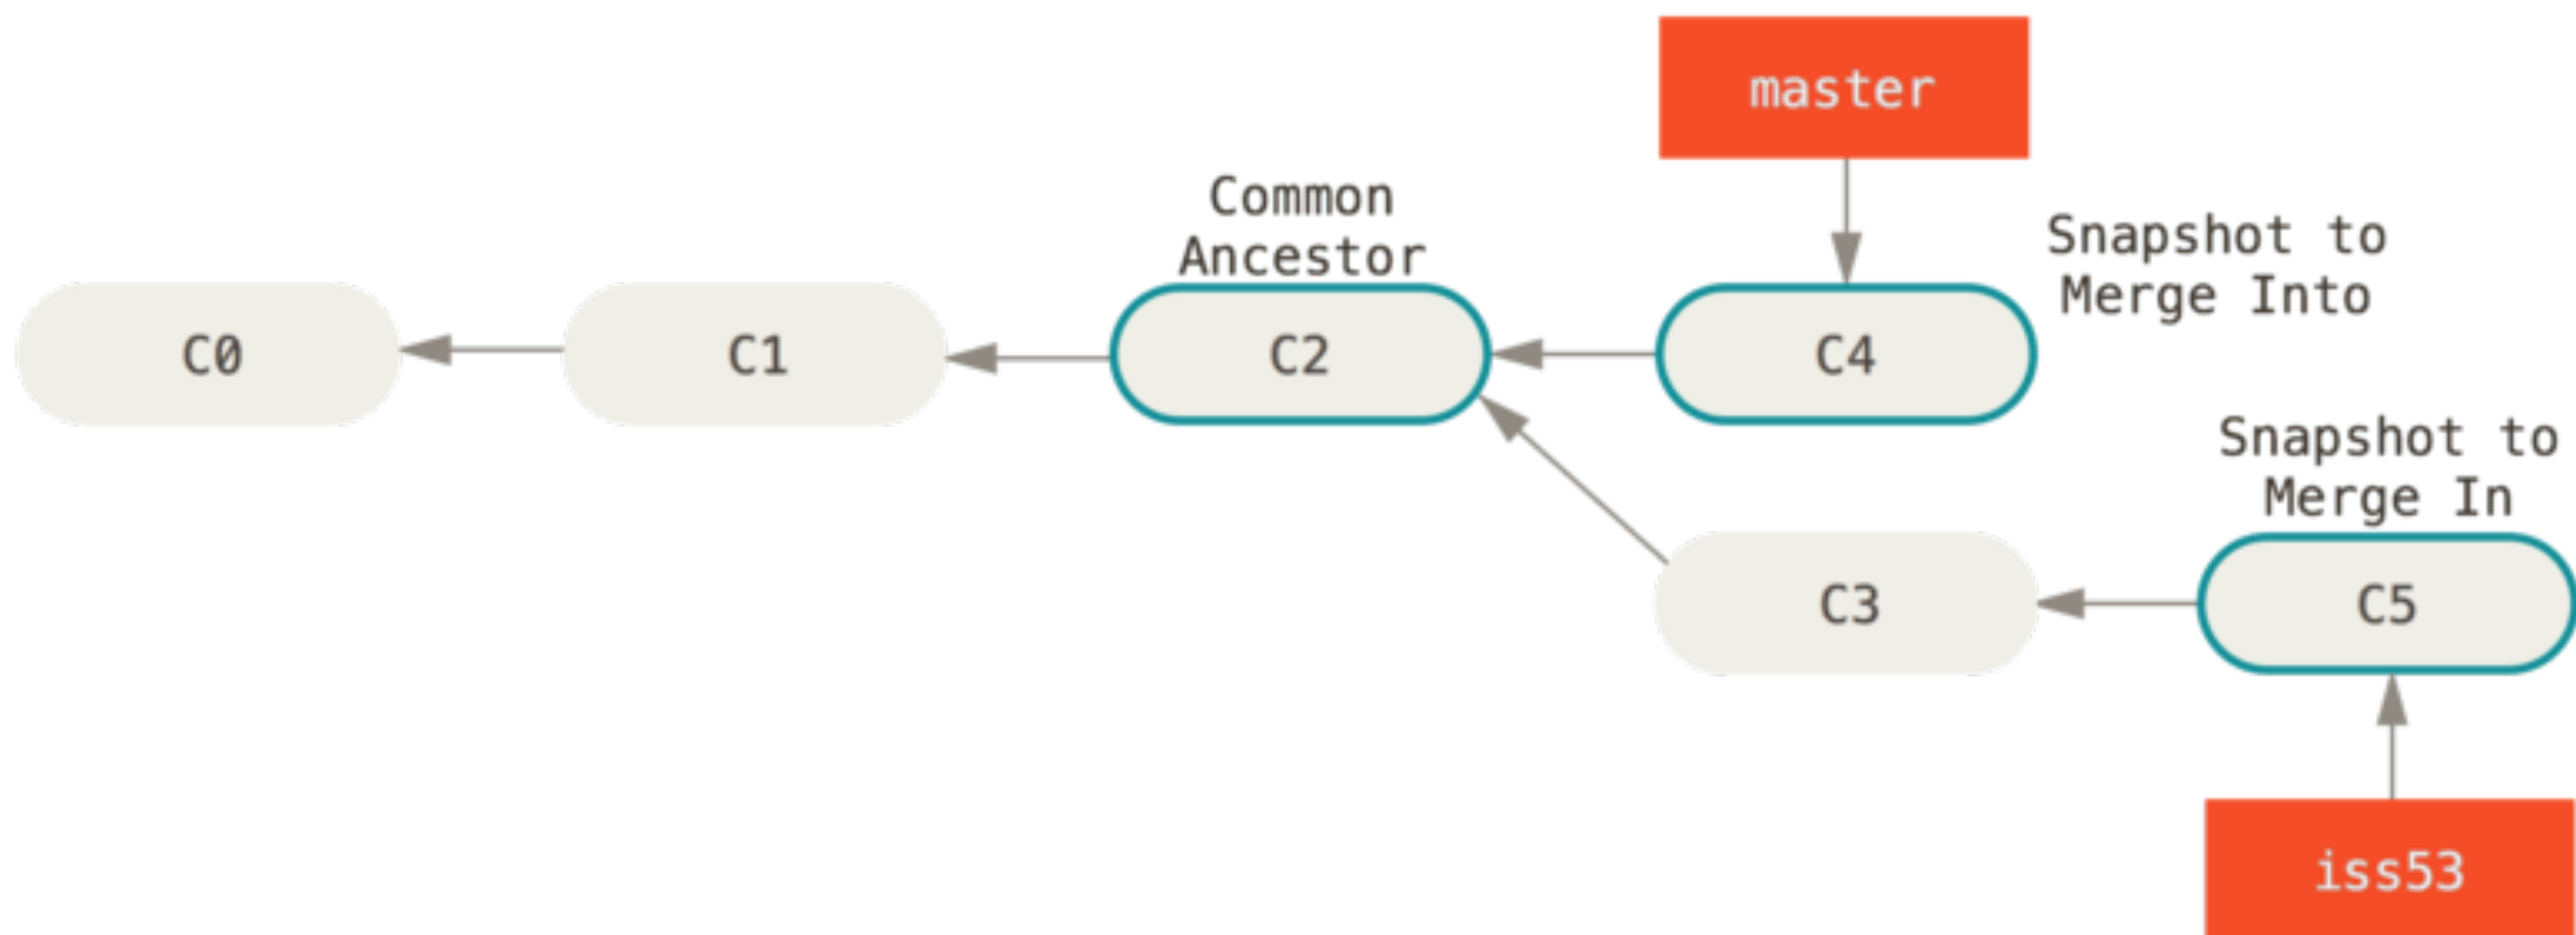

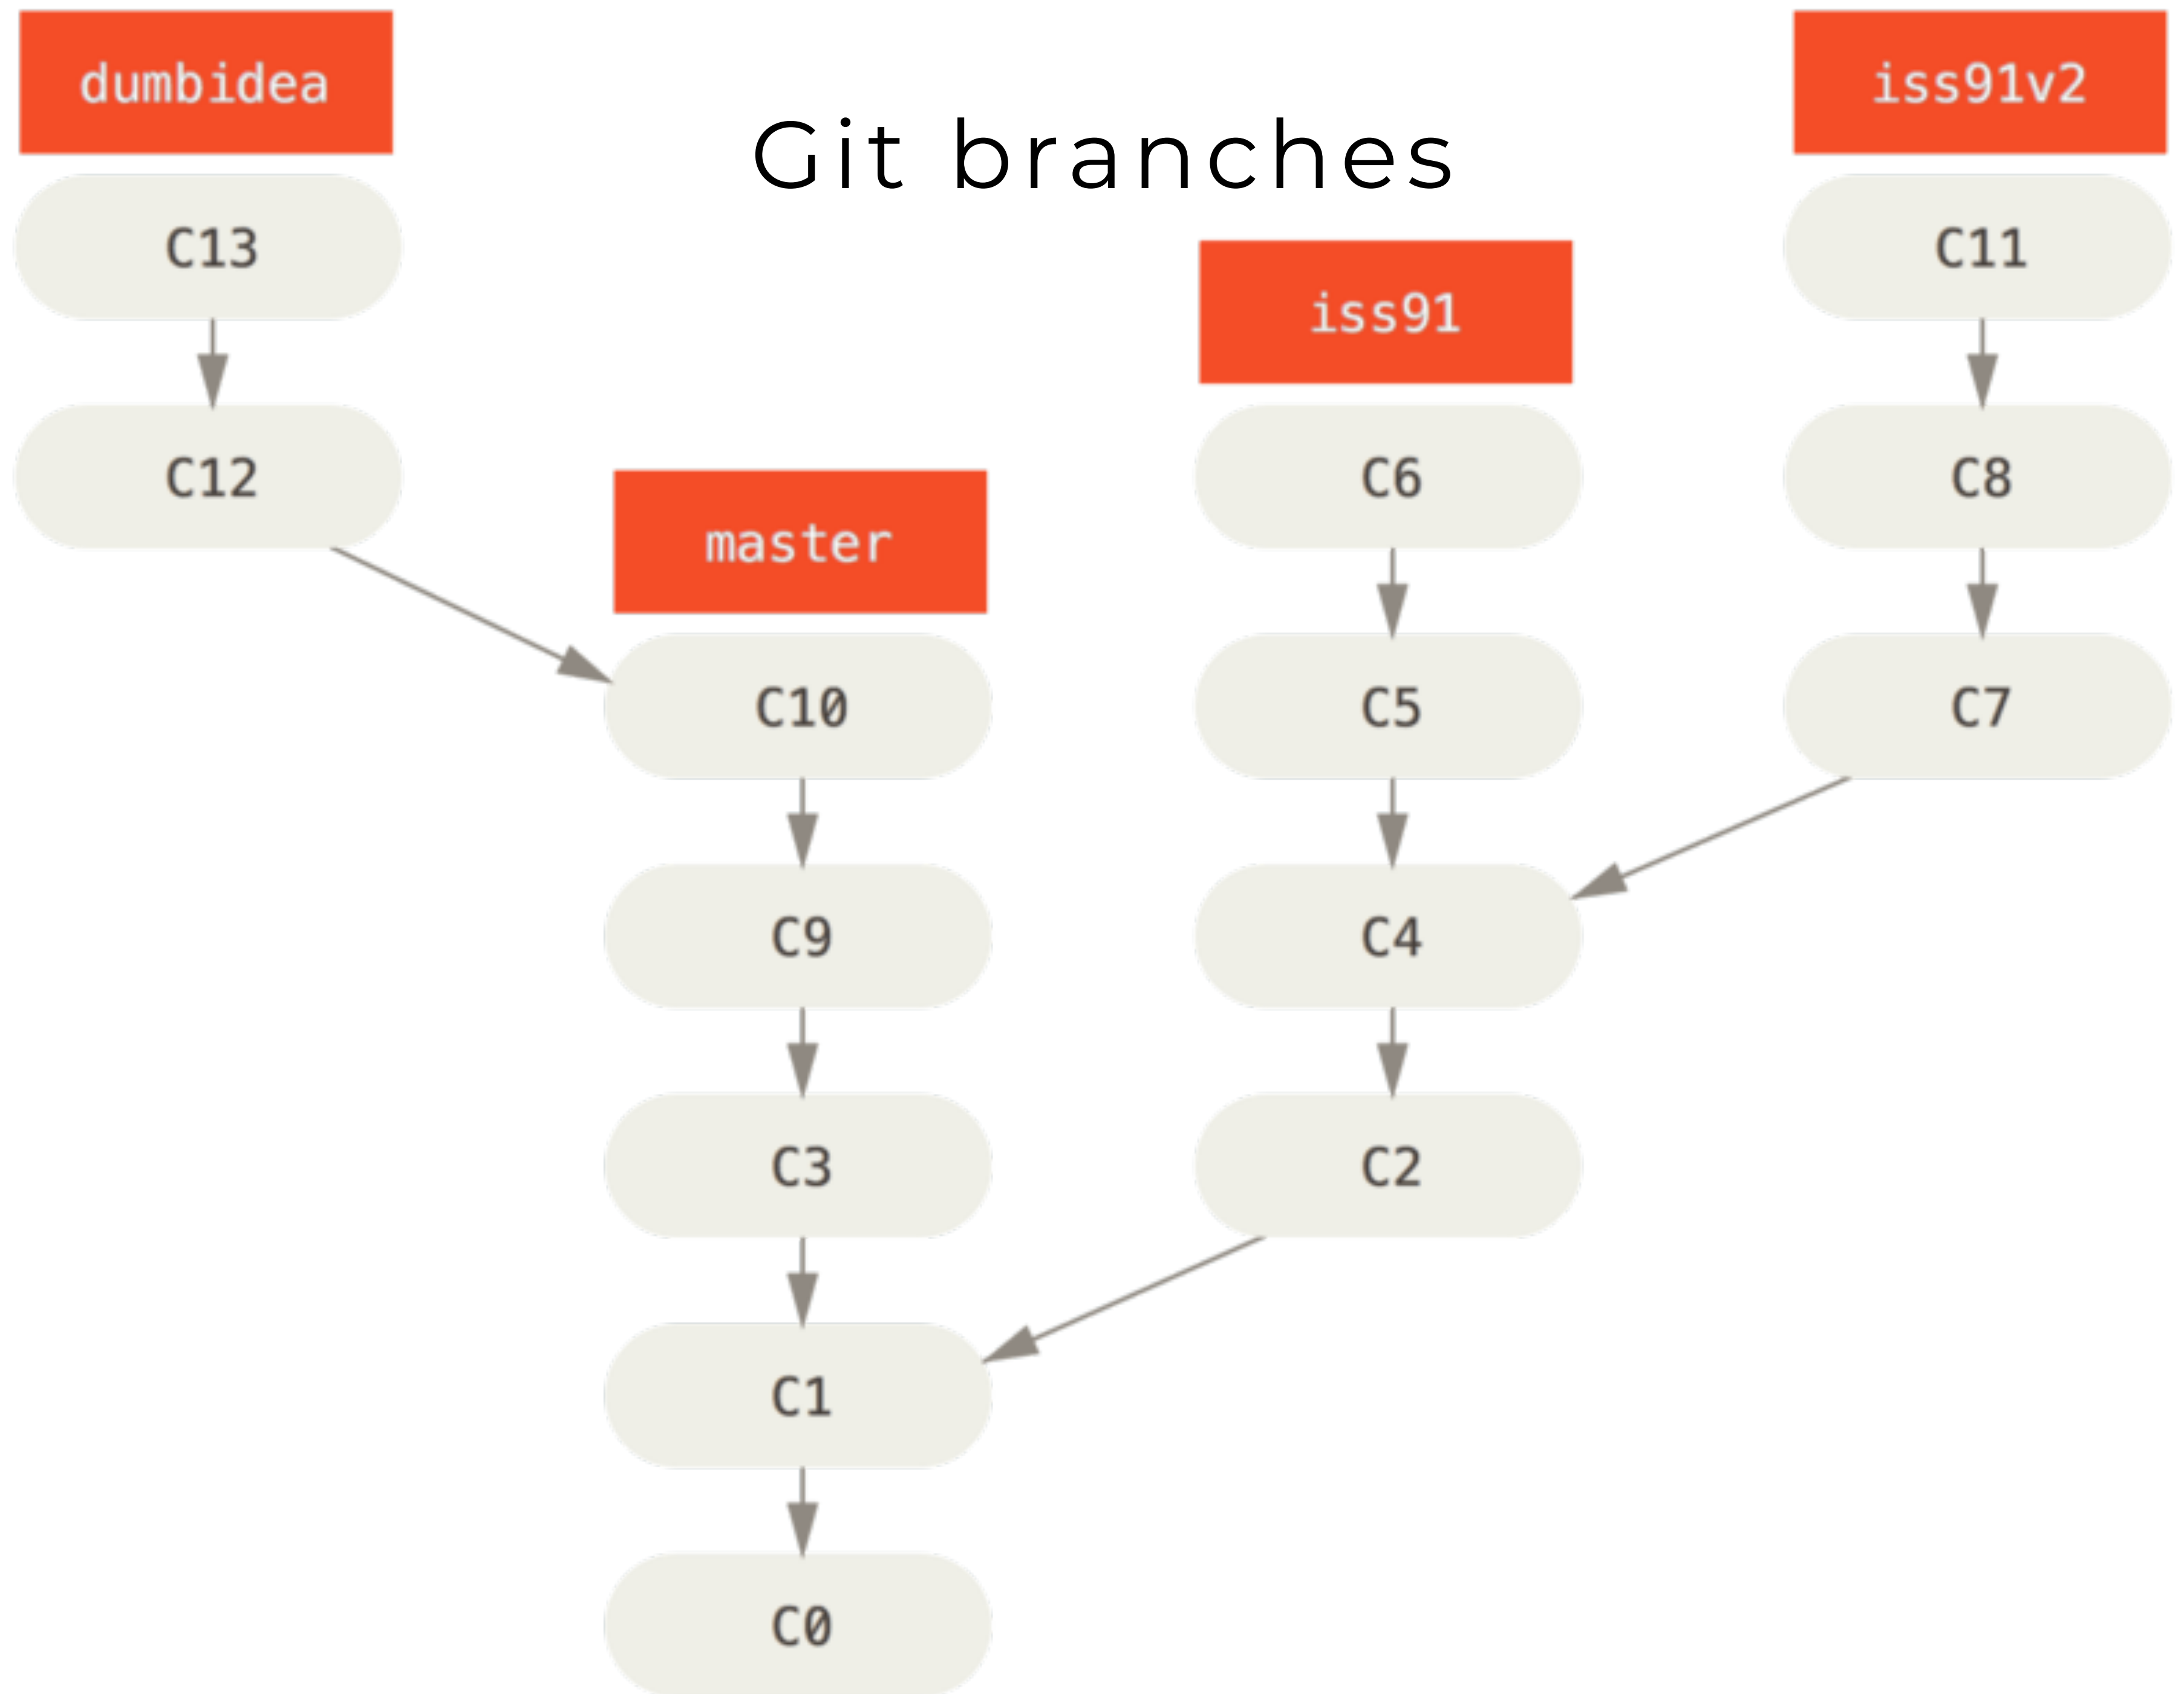

# Git branches

# Git branches

# Git branches

# Github vs Gitlab

# Github

- GitHub is a web-based hosting service for version control using git.
- Written in Ruby
- It offers:
  - All of the distributed version control
  - Source code management functionality of Git

# Gitlab

- GitLab is a web-based Git repository manager
- Wiki and issue tracking features
- Open Source license
- Written in Ruby.
- written by Dmitriy Zaporozhets and Valery Sizov from Ukraine.
